

## Why use a low-code BSS?

### **Low-Code Software vs Legacy Systems**

compete in todays' digital services marketplace, CSPs need to react in real time. They can't leave money on the table when demand surges, or lose a high-value subscriber because of a one-size-fits-all return policy.

Their software must react to real-time triggers and make pricing, policy, and business rules adjustments on the fly.

**LEGACY BSS SYSTEMS CAN'T CHANGE FAST.** 

**BUT A LOW-CODE BSS CAN.** PLUS, IT CAN CHANGE THE RULES IN REALTIME.

### What is Low-Code Software?

"Platforms that enable rapid delivery of business applications minimal with a minimum of hand-coding and upfront investment in setup, training and deployment"

Forrester 2014

In Short...

modeling platform to define data models, user interfaces, business logic and more Little to no hand-coding

Instead, low code uses a visual
